

Key Switch (**S286B-2**)

Key switches are electromechanical devices used in various applications to control the flow of electric current. They are commonly found in control panels, security systems, and many other electronic devices. The primary function of a key switch is to provide a user-operated mechanism for opening or closing an electrical circuit.

Features

- Zinc alloy die cast housing and cylinder.
- Bright chrome plated standard.
- 5-disc tumbler mechanism.
- Reversible double-bitted brass keys, nickel plated.
- silver plated contacts and terminals.
- S286B 2 position (on-on) 4 terminals. (1NO 1NO)
- Hex nut or speed clip mounted.
- 25 combinations standard (#2801-2825)
